ELG FMS · FUNDS MONITORING SYSTEM

User Guide

How to use every page of ELG FMS: market performance, news, fund and index research, monitoring, client reports, calculators and product brochures.

Version **V2.0.0** October 2026 Funds Monitoring System

CONTENTS

What's inside

1	Getting around	6	Report Generation
2	Market Performance	7	Calculator: Plan, PRUShield, PruCredit$
3	Market News	8	Annex: product brochures
4	Fund Explorer	9	Settings
5	Monitoring	10	When the data updates

1 · BASICS

Getting around

ELG FMS runs in any web browser on a computer, tablet or phone. There is nothing to install and no sign-in.

The main parts of the screen

- **Side menu** (left): Market Performance, Market News, Fund Explorer, Monitoring and Report Generation, with Settings at the bottom. The ☰ button at the top left shows or hides it. On a phone, the pages are in a tab bar along the bottom of the screen.
- **Top right**: **Data loaded** shows the data is ready. **Refresh** reloads the page with the latest data.
- **Footer** (bottom): the version number **V2.0.0** opens the changelog, a list of what changed in each version. **Calculator** opens the Plan, PRUShield and PruCredit$ calculators, **Annex** opens the product brochures and **Feedback** opens a short feedback form.

Funds and indices

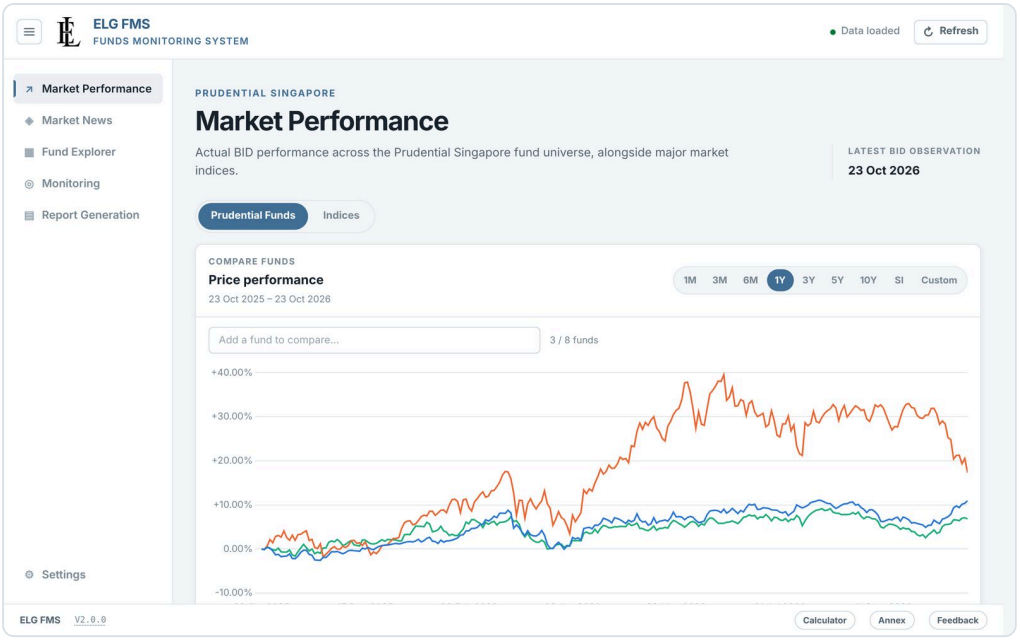

Most pages have a **Prudential Funds** / **Indices** switch at the top. **Prudential Funds** covers the Prudential Singapore ILP fund range, using Prudential's published BID prices. **Indices** covers 48 major market indices (such as the MSCI World and S&P 500), using their daily closing levels.

> **Your choices are remembered.** Watchlists, alert rules, theme, text size and most filters are saved in your browser on that device. They are not sent anywhere, so a different device or browser starts fresh.

2 · MARKET PERFORMANCE

Compare how funds and indices have performed

Chart several funds or indices together, and see the best and worst performers at a glance.

Comparing three Prudential funds over 1 year.

Compare on a chart

1. Choose **Prudential Funds** or **Indices**.
2. Type a name or code in **Add a fund to compare** and pick from the list. You can compare up to 8 at a time.
3. Pick a period: **1M** to **10Y**, **SI** (since inception), or **Custom** for your own dates.

Every line starts at 0% on the first day of the period, so you can compare the percentage change directly. The table under the chart shows each one's start and end price and its change.

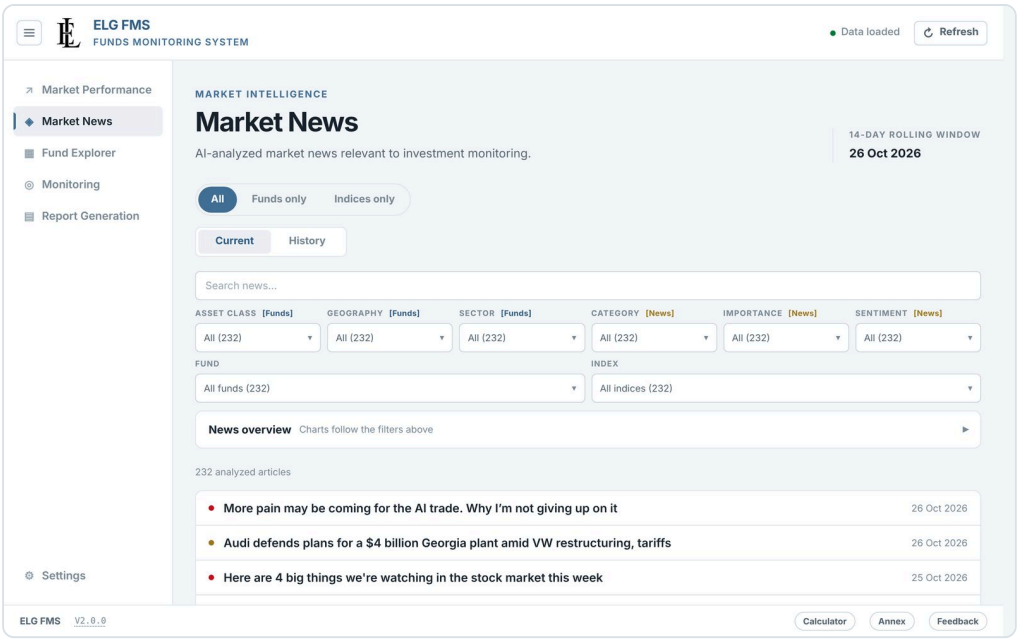

Top 10 and Lower 10 performers

The cards below the chart show how many are included, plus the strongest and weakest performers. Choose the comparison with **D-D** (day), **W-W** (week), **M-M** (month), **Y-Y** (year) or **S-I** (since inception). The **Top 10 Performer** table lists the best ten. Click **Show Lower 10** to see the weakest ten; that table hides again whenever the page is refreshed.

3 · MARKET NEWS

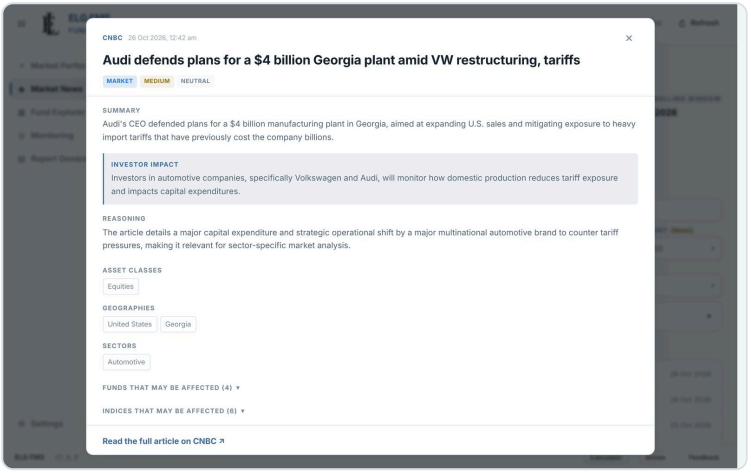

News that matters for your funds

Market news from CNBC, analysed by AI to show which asset classes, regions, sectors, funds and indices each story may affect.

The news list with its filters.

- **All** / **Funds only** / **Indices only**: show all news, or only stories linked to at least one Prudential fund or index.
- **Current** covers the latest 14 days. **History** lets you look back at earlier news.
- **Filters**: asset class, geography, sector, category, importance, sentiment, a specific **fund** or a specific **index**. The numbers show how many articles match.
- **News overview**: open it for charts that summarise the news matching your filters.

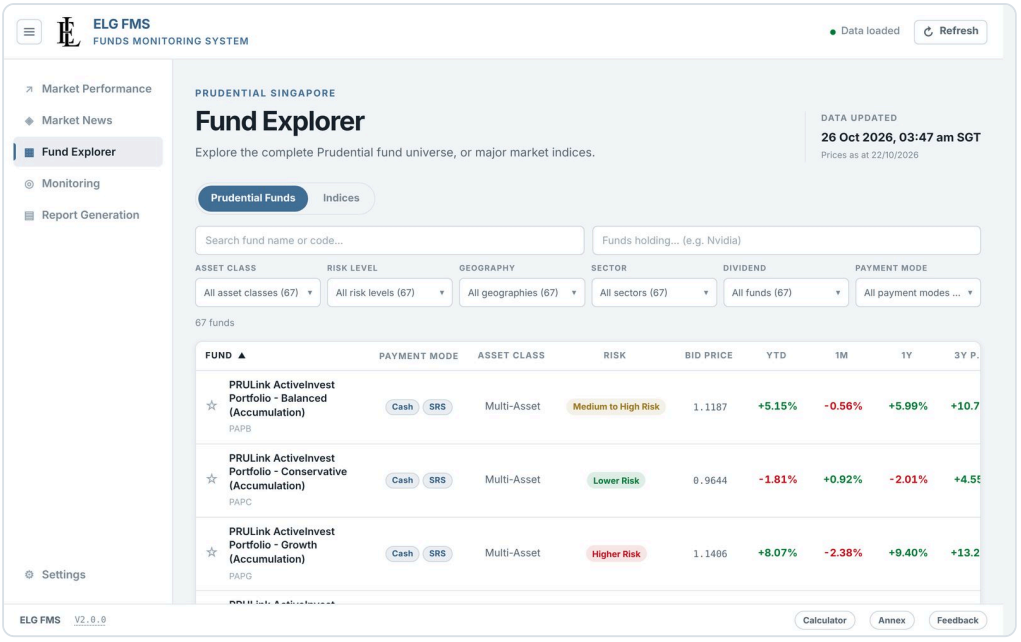

An article: summary, investor impact and what it may affect.

Click any headline to open it. You'll see a summary, the **investor impact**, the reasoning, and the areas involved. Open **Funds that may be affected** or **Indices that may be affected** to see the links, and use **Read the full article on CNBC** for the original story.

4 · FUND EXPLORER

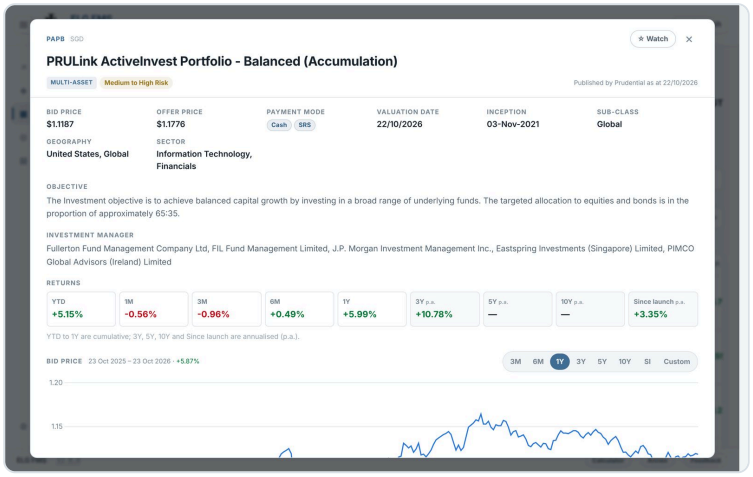

Research any fund or index

A searchable table of every Prudential fund or index, with a full profile for each one.

The Prudential fund table.

- **Search** by fund name or code, or use **Funds holding...** to find funds that hold a company (for example, Nvidia).
- **Filter** by asset class, risk level, geography, sector, dividend and payment mode (Cash, SRS, CPF-OA, CPF-SA). For indices the filters change to suit, for example region.
- **Sort** by clicking a column heading. Click the ☆ star to add a fund to your Monitoring watchlist.
- Returns up to 1 year are cumulative. 3Y, 5Y, 10Y and since-launch returns are **annualised** (marked *p.a.*).

A fund profile.

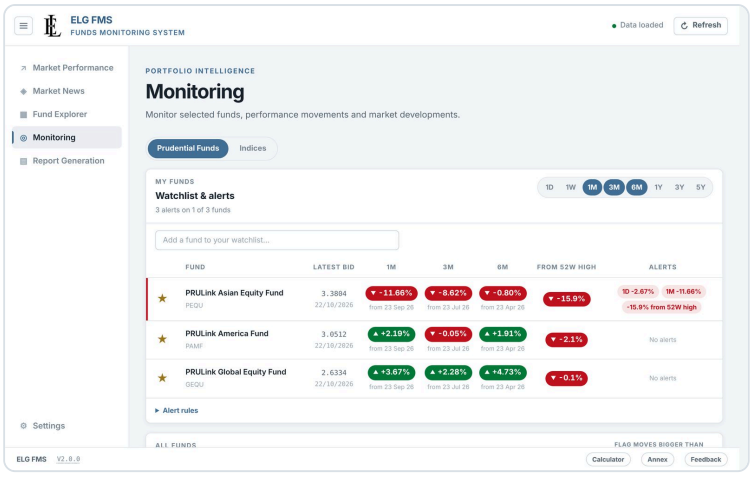

Click a fund or index for its profile: prices, payment modes, objective, fund manager, returns for each period, a price chart with its own period buttons, and the top holdings. ☆ Watch adds it to your watchlist.

> A fund tagged **Not updated since ...** couldn't be refreshed in the latest data update. It shows its last good data until the next successful update.

5 · MONITORING

Watch funds and get alerts

Keep a watchlist of funds or indices, see how each has moved, and get flagged when something needs attention.

A watchlist with alerts on one fund.

Watchlist & alerts

- Add funds by typing in **Add a fund to your watchlist**, or with `☆ Watch` in Fund Explorer. Funds and indices have separate watchlists.
- Choose the periods to show, from `1D` to `5Y`. You can turn on several at once, and 1M, 3M and 6M are on by default. Each figure shows the date it is measured from.
- A fund that meets an alert rule is highlighted, and the **Alerts** column says why.

Alert rules

Open **Alert rules** to switch each rule on or off and set its threshold and direction (falls, rises or both). The defaults are:

RULE	DEFAULT
1-day move	2% or more, up or down
1-week move	A fall of 3% or more
1-month move	A fall of 5% or more
From 52-week high	10% or more below its highest price of the past year

`Reset to defaults` restores these.

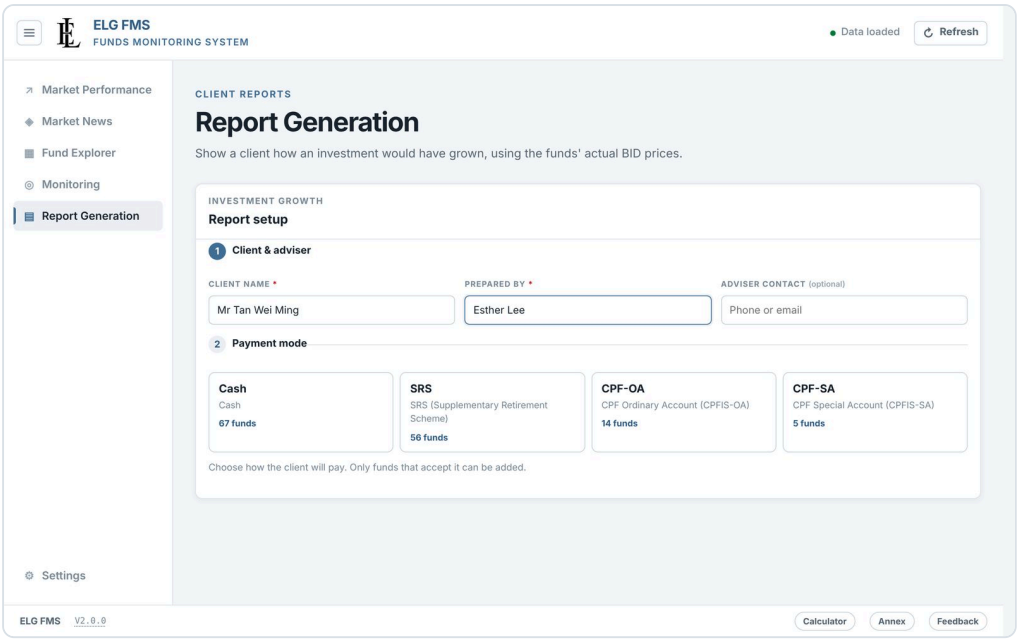

Unusual moves

This section scans **all** funds (or indices), not just your watchlist. It lists unusual daily and weekly moves, new 52-week highs and lows, and those furthest below their 52-week high. A move counts as unusual when it is bigger than that fund's normal movement; change how much bigger with **Flag moves bigger than** (for example, 2× usual).

6 · REPORT GENERATION

Create a client investment report

Show a client how an investment would have grown, using the funds' actual BID prices, then print it or save it as a PDF.

Each step opens once the previous one is complete.

1. **Client & adviser**: the client's name and yours (your contact details are optional).
2. **Payment mode**: Cash, SRS, CPF-OA or CPF-SA. Only funds that accept it can be chosen.
3. **Premium**: an initial lump sum and/or regular top-ups, with start and end dates. Payment term is optional; leave it empty to pay top-ups until the end date.
4. **Funds & allocation**: choose funds and split the premium in steps of 5% (total 100%). `Split equally` does it for you.
5. **Investment booster**: optional one-off extra investments, each with its own date, amount and fund split.
6. **Fund switching**: optional. Pick the date, the fund and the **% of units** to switch out, and the fund(s) to switch into. A 100% switch also sends future top-ups to the new funds. If any funds pay dividends, also choose whether the report pays them out as cash or reinvests them.

Changing BID prices

The report uses Prudential's published BID prices. You can type a different BID price for a purchase date, the end date, or a switch (out and in). Prices you change are listed in the report.

The report

Click `Generate report` to see an A4 preview with the growth chart, each fund's result, any switches carried out, and the notes. Use `Print / Save as PDF` to print it or save it.

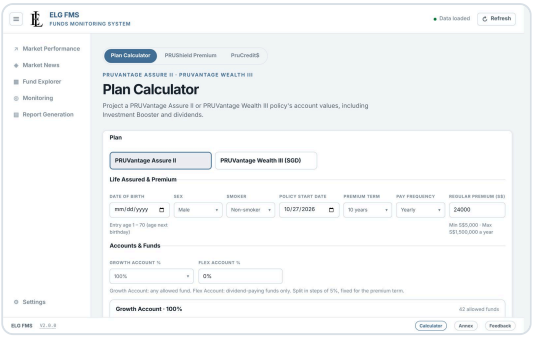

> **Private by design.** Nothing you enter on this page is saved or sent anywhere.

7 · CALCULATOR

Plan, PRUShield and PruCredit$ calculators

Open `Calculator` in the footer, then choose a calculator with the switch at the top.

Plan Calculator

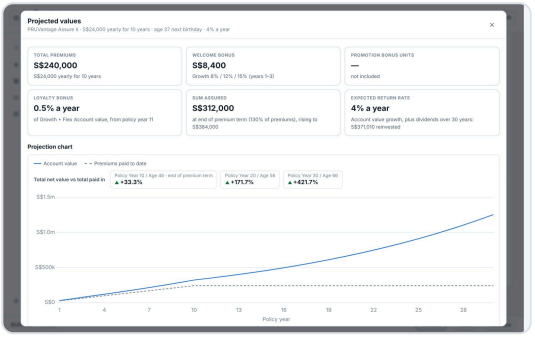

Plan setup for PRUVantage Assure II.

Project the account values of a **PRUVantage Assure II** or **PRUVantage Wealth III (SGD)** policy.

1. **Plan**: choose PRUVantage Assure II or PRUVantage Wealth III.
2. **Life assured & premium**: date of birth (plus sex and smoker status for Assure II), policy start date, premium term, pay frequency and regular premium. The allowed ages and premiums are shown under each field.
3. **Accounts & funds**: split the premium between the Growth Account and the Flex Account (dividend-paying funds only), then add funds to each account and set their allocations (total 100%).
4. **Investment Booster**: optional extra investments, with their own funds.
5. **Investment return**: the expected return rate, how many years to show, and whether dividends are reinvested or paid out.

Once every field is filled in, click `Generate`.

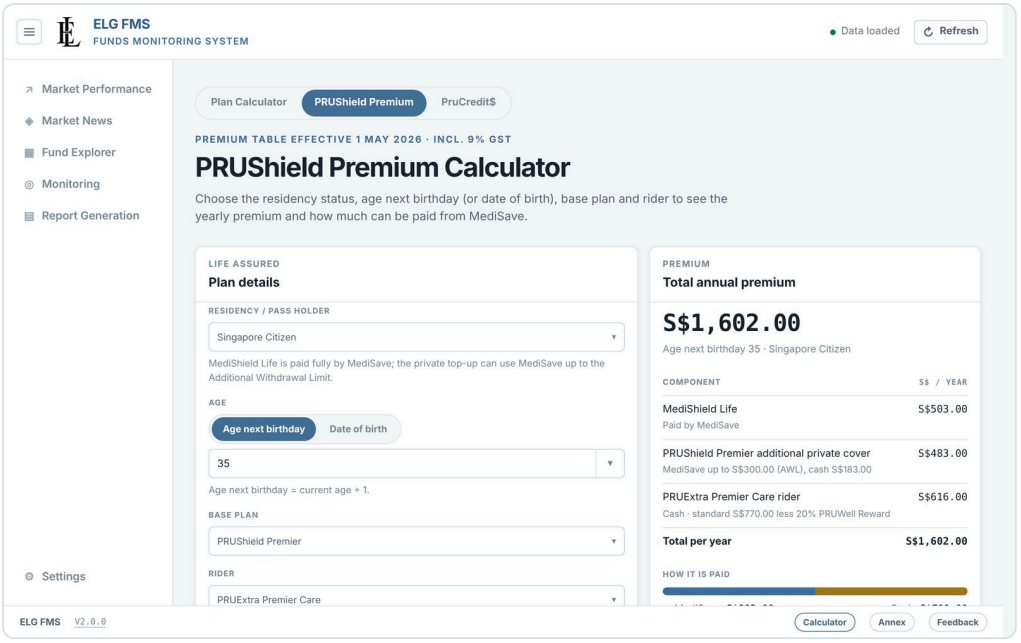

Projected values: summary, chart and policy illustration.

The **Projected values** popup shows the total premiums, welcome and loyalty bonuses, sum assured, a projection chart of account value against premiums paid, and a year-by-year policy illustration.

> Projections are illustrations only, based on the return rate you enter. They are not guaranteed and do not replace Prudential's official policy illustration.

7 · CALCULATOR

PRUShield Premium

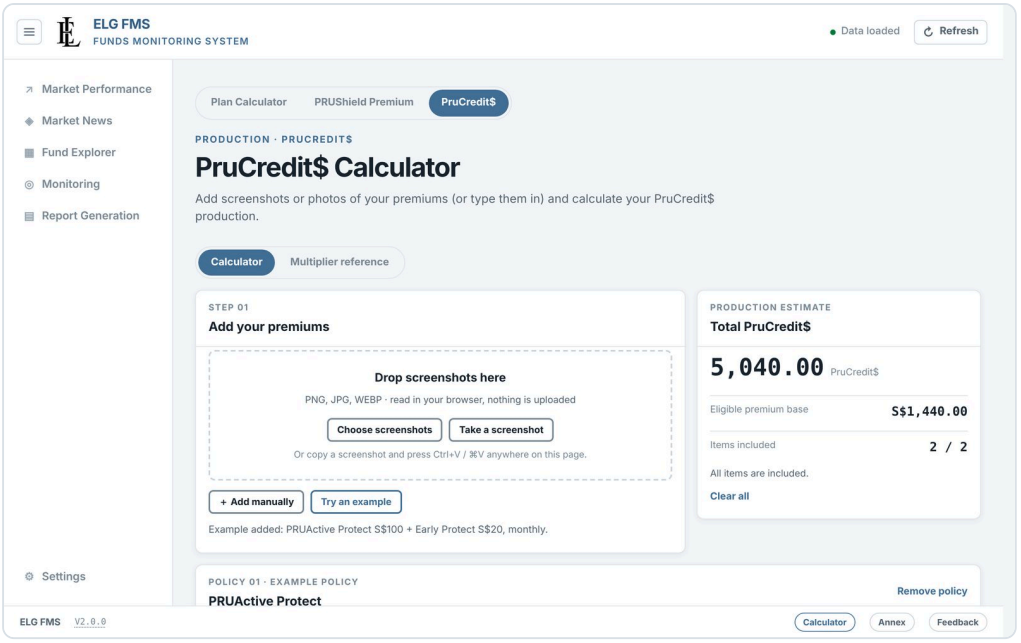

PRUShield premium for a Singapore Citizen, age next birthday 35.

1. Choose the **residency / pass holder** status.
2. Enter the **age next birthday**: pick it from the list or type it. You can also switch to **Date of birth** and enter that instead; the age is worked out for you.
3. Choose the **base plan** and **rider**.

The right-hand card shows the total annual premium, broken down into MediShield Life, the PRUShield private cover and the rider, and how much can be paid from MediSave versus cash.

7 · CALCULATOR

PruCredit$

PruCredit$ with an example policy.

Work out the PruCredit$ production for one or more policies. Add premiums in any of these ways:

- **Drop screenshots** into the box, or click **Choose screenshots**. The premiums are read automatically.
- **Paste**: copy a screenshot or premium text and press **Ctrl+V** (**⌘V** on a Mac) anywhere on the page.
- **Take a screenshot** / **Take a photo**: on a computer this captures your screen; on a phone or tablet it opens the camera.
- **+ Add manually** to type a plan and premium, or **Try an example** to see how it works.

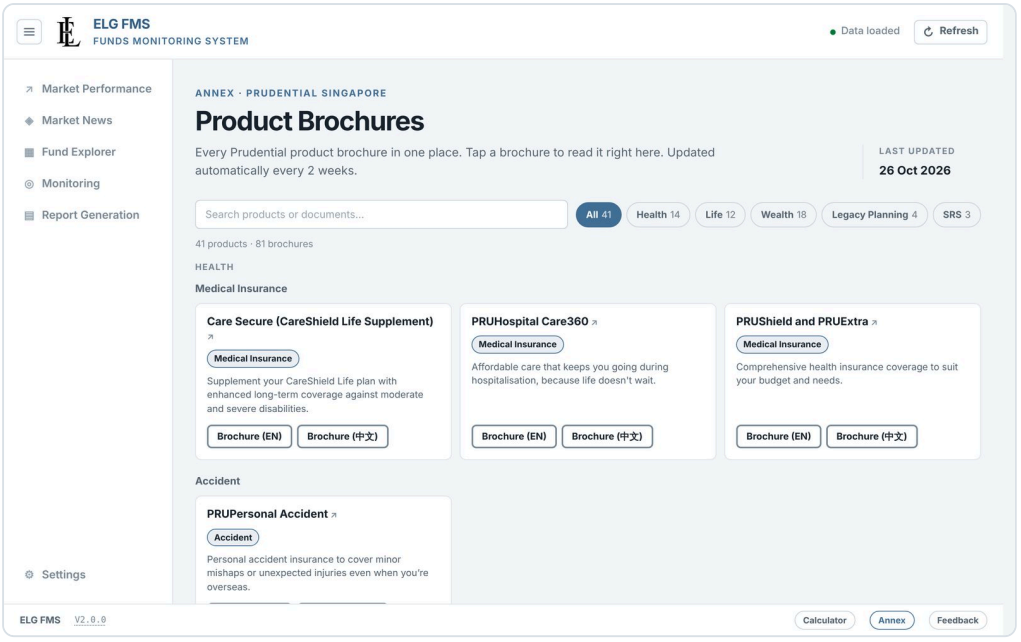

Check each policy that is read in, and correct anything if needed. The **Total PruCredit$** card shows the production estimate and the eligible premium base. **Multiplier reference** lists the multiplier for each product. Once at least one plan is added, **Download breakdown** appears at the bottom.

> **Screenshots stay on your device.** They are read in your browser and never uploaded.

8 · ANNEX

Prudential product brochures

Every Prudential Singapore product brochure in one place, in English and Chinese.

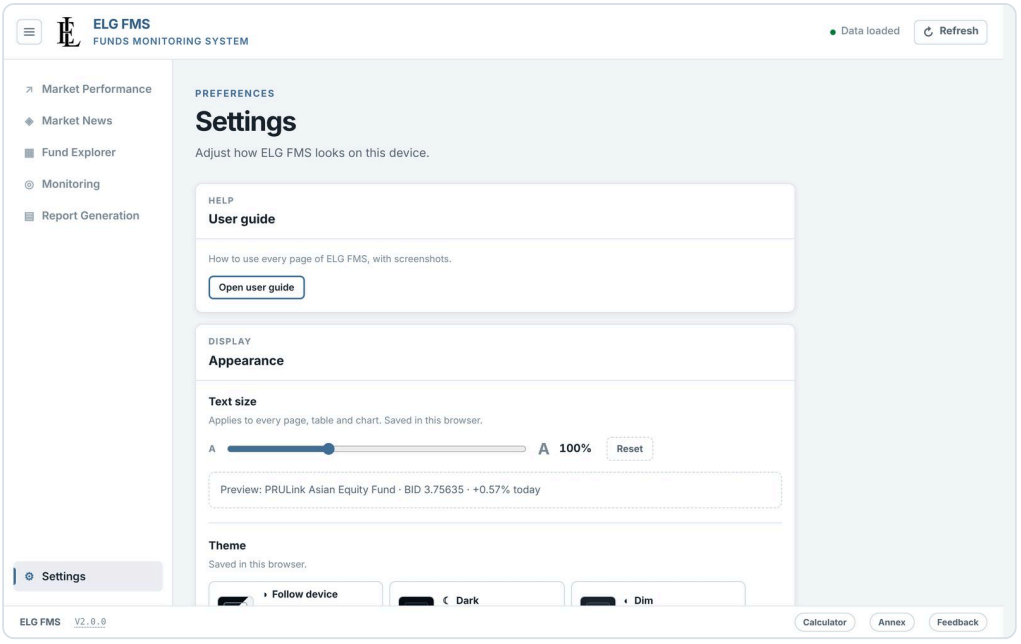

Brochures grouped by category.

- Open **Annex** in the footer. Products are grouped the way Prudential's website sorts them, and a product can appear in more than one category.
- Use the category buttons (All, Health, Life, Wealth, Legacy Planning and SRS) or **search** by product, category or tag.
- Click the **plan name** to open its product page on Prudential's website.
- Click **Brochure (EN)** or **Brochure (中文)** to read it in a popup. Use **−** **Fit** **+** to zoom, **Download** to save it, or **Open ↗** to open it in a new tab.

The brochure list is refreshed automatically every 2 weeks, so it always matches Prudential's current products.

9 · SETTINGS

Make it yours

The Settings page.

- **User guide**: opens this guide.
- **Text size**: make everything larger or smaller. `Reset` goes back to 100%.
- **Theme**: Follow device, Dark, Dim, Midnight, Light or Sepia.
- **Colour palette**: the highlight colour for buttons and selected tabs: Steel, Ocean, Gold, Teal, Violet or Rose.
- **Update schedule**: countdowns to the next automatic data updates.

When the data updates

The data updates automatically on these schedules (Singapore time). Automatic updates can start up to about 30 minutes late. Click **Refresh** to load the newest data.

DATA	COVERS	WHEN
Fund details	BID prices, returns, holdings, dividends	Twice daily, 12:00 am and 12:00 pm
Market news	News from CNBC	Every 3 hours from 12:20 am
News analysis	AI analysis of the news	About 15 minutes after each news update
Index closes	Closing levels of 48 indices	Twice daily, 6:30 am and 6:30 pm
Brochures	Prudential product brochures	Every 2 weeks, Monday morning

Important. ELG FMS is for information only and is not financial advice. Fund prices come from Prudential Singapore and index levels from public market data. Past performance is not a guide to future performance. Check the product summary and brochure before making any decision.
